FlyTV Express X1 MST-STA²

Triple reception PCIe TV card

The universal TV card -
DVB-S/DVB-T/Analog TV/Analog video/FM Radio

Digital satellite, digital terrestrial, and analog TV all in one easy to use card - LifeView gives you an amazing triple reception card for your desktop PC. The FlyTV Express X1 MST-STA² has the functions of five cards in one convenient solution. Watch TV from around the world with DVB-S digital satellite TV/radio reception, or enjoy local digital TV with DVB-T digital terrestrial TV/radio reception. Enjoy all your current favorite channels with analog TV reception, or sit back and relax to FM radio(optional). You can even connect an external video source using the S-Video or composite video inputs.

MST Technology - Taking PIP viewing to the next level

Empowered with MST technology, the X1 MST-STA² is more than just a universal TV card. It also lets you watch multiple video sources at the same time; watch any two TV channels at the same time, digital or analog. Enjoy a DVD quality movie on digital TV while watching the news on analog TV, or watch two different shows on digital TV at the same time! Watch each video stream full-frame and side by side, or in movable, resizable windows in PIP mode. You can even record from one source while watching the others at the same time!

The LifeView MVP - The center of your TV experience

Bringing together all of these features is the LifeView MVP application. Its clean, user-friendly interface offers convenient access to a wealth of functions aside from the MST PIP and M-PIC functions. Timeshifting lets you pause, rewind and fast forward live video, and One-Touch scheduled recording from EPG takes the hassle out of recording your favorite shows!
